SP601 Hardware
User Guide

UG518 (v1.7) September 26, 2012

XILINX

Revision History

The following table shows the revision history for this document.

Date	Version	Revision
07/15/09	1.0	Initial Xilinx release.
08/19/09	1.1	? Added Appendix B, VITA 57.1 FMC LPC Connector Pinout . ? Updated Figure 1-17. ? Updated Table 1-4, Table 1-19, and Table 1-22. ? Added introductory paragraph to Appendix C, SP601 Master UCF . ? Miscellaneous typographical edits and new user guide template.
05/17/10	1.2	? Updated Figure 1-1, Figure 1-2, Figure 1-14, Figure 1-18, Table 1-9, Table 1-1 , Table 1-11, and Table 1-16. ? Added Figure 1-7, Figure 1-8, and Table 1-13. ? Updated 9. VITA 57.1 FMC-LPC Connector, page 25, Appendix B, VITA 57.1 FMC LPC Connector Pinout , and Appendix C, SP601 Master UCF .
06/16/10	1.3	Reversed order of 15. Configuration Options and 16. Power Management . Updated 1. Spartan-6 XC6SLX16-2CSG324 FPGA and 2. 128 MB DDR2 Component Memory . Added Table 1-26. Added UG394 , Spartan-6 FPGA Power Management User Guide to Appendix D, References.
09/24/10	1.4	Added Power System Test Points , including Table 1-25.
02/16/11	1.5	Added note and revised header description to indicate the I/Os support LVCMOS25 signaling on page 34. Revised oscillator manufacturer information from Epson to SiTime on page page 23 and page 51.
07/18/11	1.6	Corrected wording from " PPM frequency jitter " to " PPM frequency stability " in Oscillator (Differential), page 23. Added Table 1-15, page 27.
09/26/12	1.7	Added Regulatory and Compliance Information, page 53.

About This Guide

This manual accompanies the Spartan?-6 FPGA SP601 Evaluation Board and contains information about the SP601 hardware and software tools.

Guide Contents

This manual contains the following chapters:

- ? Chapter 1, SP601 Evaluation Board, provides an overview of the SP601 evaluation board and details the components and features of the SP601 board.
- ? Appendix A, Default Jumper and Switch Settings.
- ? Appendix B, VITA 57.1 FMC LPC Connector Pinout.
- ? Appendix C, SP601 Master UCF.
- ? Appendix D, References.

Additional Documentation

The following documents are available for download at http://www.xilinx.com/products/spartan6.

- ? Spartan-6 Family Overview

  This overview outlines the features and product selection of the Spartan-6 family.

- ? Spartan-6 FPGA Data Sheet: DC and Switching Characteristics

  This data sheet contains the DC and switching characteristic specifications for the Spartan-6 family.

- ? Spartan-6 FPGA Packaging and Pinout Specifications

  This specification includes the tables for device/package combinations and maximum I/Os, pin definitions, pinout tables, pinout diagrams, mechanical drawings, and thermal specifications.

- ? Spartan-6 FPGA Configuration User Guide

  This all-encompassing configuration guide includes chapters on configuration interfaces (serial and parallel), multi-bitstream management, bitstream encryption, boundary-scan and JTAG configuration, and reconfiguration techniques.

- ? Spartan-6 FPGA SelectIO Resources User Guide

  This guide describes the SelectIO? resources available in all Spartan-6 devices.

- ? Spartan-6 FPGA Clocking Resources User Guide

This guide describes the clocking resources available in all Spartan-6 devices, including the DCMs and PLLs.

? Spartan-6 FPGA Block RAM Resources User Guide

This guide describes the Spartan-6 device block RAM capabilities.

? Spartan-6 FPGA DSP48A1 Slice User Guide

This guide describes the architecture of the DSP48A1 slice in Spartan-6 FPGAs and provides configuration examples.

? Spartan-6 FPGA Memory Controller User Guide

This guide describes the Spartan-6 FPGA memory controller block, a dedicated embedded multi-port memory controller that greatly simplifies interfacing Spartan-6 FPGAs to the most popular memory standards.

? Spartan-6 FPGA PCB Designer's Guide

This guide provides information on PCB design for Spartan-6 devices, with a focus on strategies for making design decisions at the PCB and interface level.

Additional Support Resources

To search the database of silicon and software questions and answers or to create a technical support case in WebCase, see the Xilinx website at:

http://www.xilinx.com/support.

Chapter 1

SP601 Evaluation Board

Overview

The SP601 board enables hardware and software developers to create or evaluate designs targeting the Spartan?-6 XC6SLX16-2CSG324 FPGA.

The SP601 provides board features for evaluating the Spartan-6 family that are common to most entry-level development environments. Some commonly used features include a DDR2 memory controller, a parallel linear flash, a tri-mode Ethernet PHY, general-purpose I/O (GPIO), and a UART. Additional functionality can be added through the VITA 57.1.1 expansion connector. Features, page 8 provides a general listing of the board features with details provided in Detailed Description, page 10.

Additional Information

Additional information and support material is located at:

? http://www.xilinx.com/sp601

This information includes:

? Current version of this user guide in PDF format

? Example design files for demonstration of Spartan-6 FPGA features and technology

? Demonstration hardware and software configuration files for the SP601 linear and SPI memory devices

? Reference Design Files

? Schematics in PDF format and DxDesigner schematic format

? Bill of materials (BOM)

? Printed-circuit board (PCB) layout in Allegro PCB format

? Gerber files for the PCB (Many free or shareware Gerber file viewers are available on the internet for viewing and printing these files.)

? Additional documentation, errata, frequently asked questions, and the latest news

For information about the Spartan-6 family of FPGA devices, including product highlights, data sheets, user guides, and application notes, see the Spartan-6 FPGA website at http://www.xilinx.com/support/documentation/spartan-6.htm .

Features

The SP601 board provides the following features (see   Figure 1-2 and Table 1-1):

?   1. Spartan-6 XC6SLX16-2CSG324 FPGA

?   2. 128 MB DDR2 Component Memory

?   3. SPI x4 Flash

?   4. Linear Flash BPI

?   5. 10/100/1000 Tri-Speed Ethernet PHY

?   7. IIC Bus

    ?   8Kb NV memory

    ?   External access 2-pin header

    ?   VITA 57.1 FMC-LPC connector

?   8. Clock Generation

    ?   Oscillator (Differential)

    ?   Oscillator Socket (Single-Ended, 2.5V or 3.3V)

?   SMA Connectors (Differential)

?   9. VITA 57.1 FMC-LPC Connector

?   10. Status LEDs

    ?   FPGA_AWAKE

    ?   INIT

    ?   DONE

?   13. User I/O

    ?   User LEDs

    ?   User DIP switch

    ?   User pushbuttons

    ?   GPIO male pin header

?   14. FPGA_PROG_B Pushbutton Switch

?   15. Configuration Options

    ?   3. SPI x4 Flash   (both onboard and off-board)

    ?   4. Linear Flash BPI

    ?   JTAG Configuration

?   16. Power Management

    ?   AC Adapter and 5V Input Power Jack/Switch

    ?   Onboard Power Supplies

Block Diagram

Figure 1-1 shows a high-level block diagram of the SP601 and its peripherals.
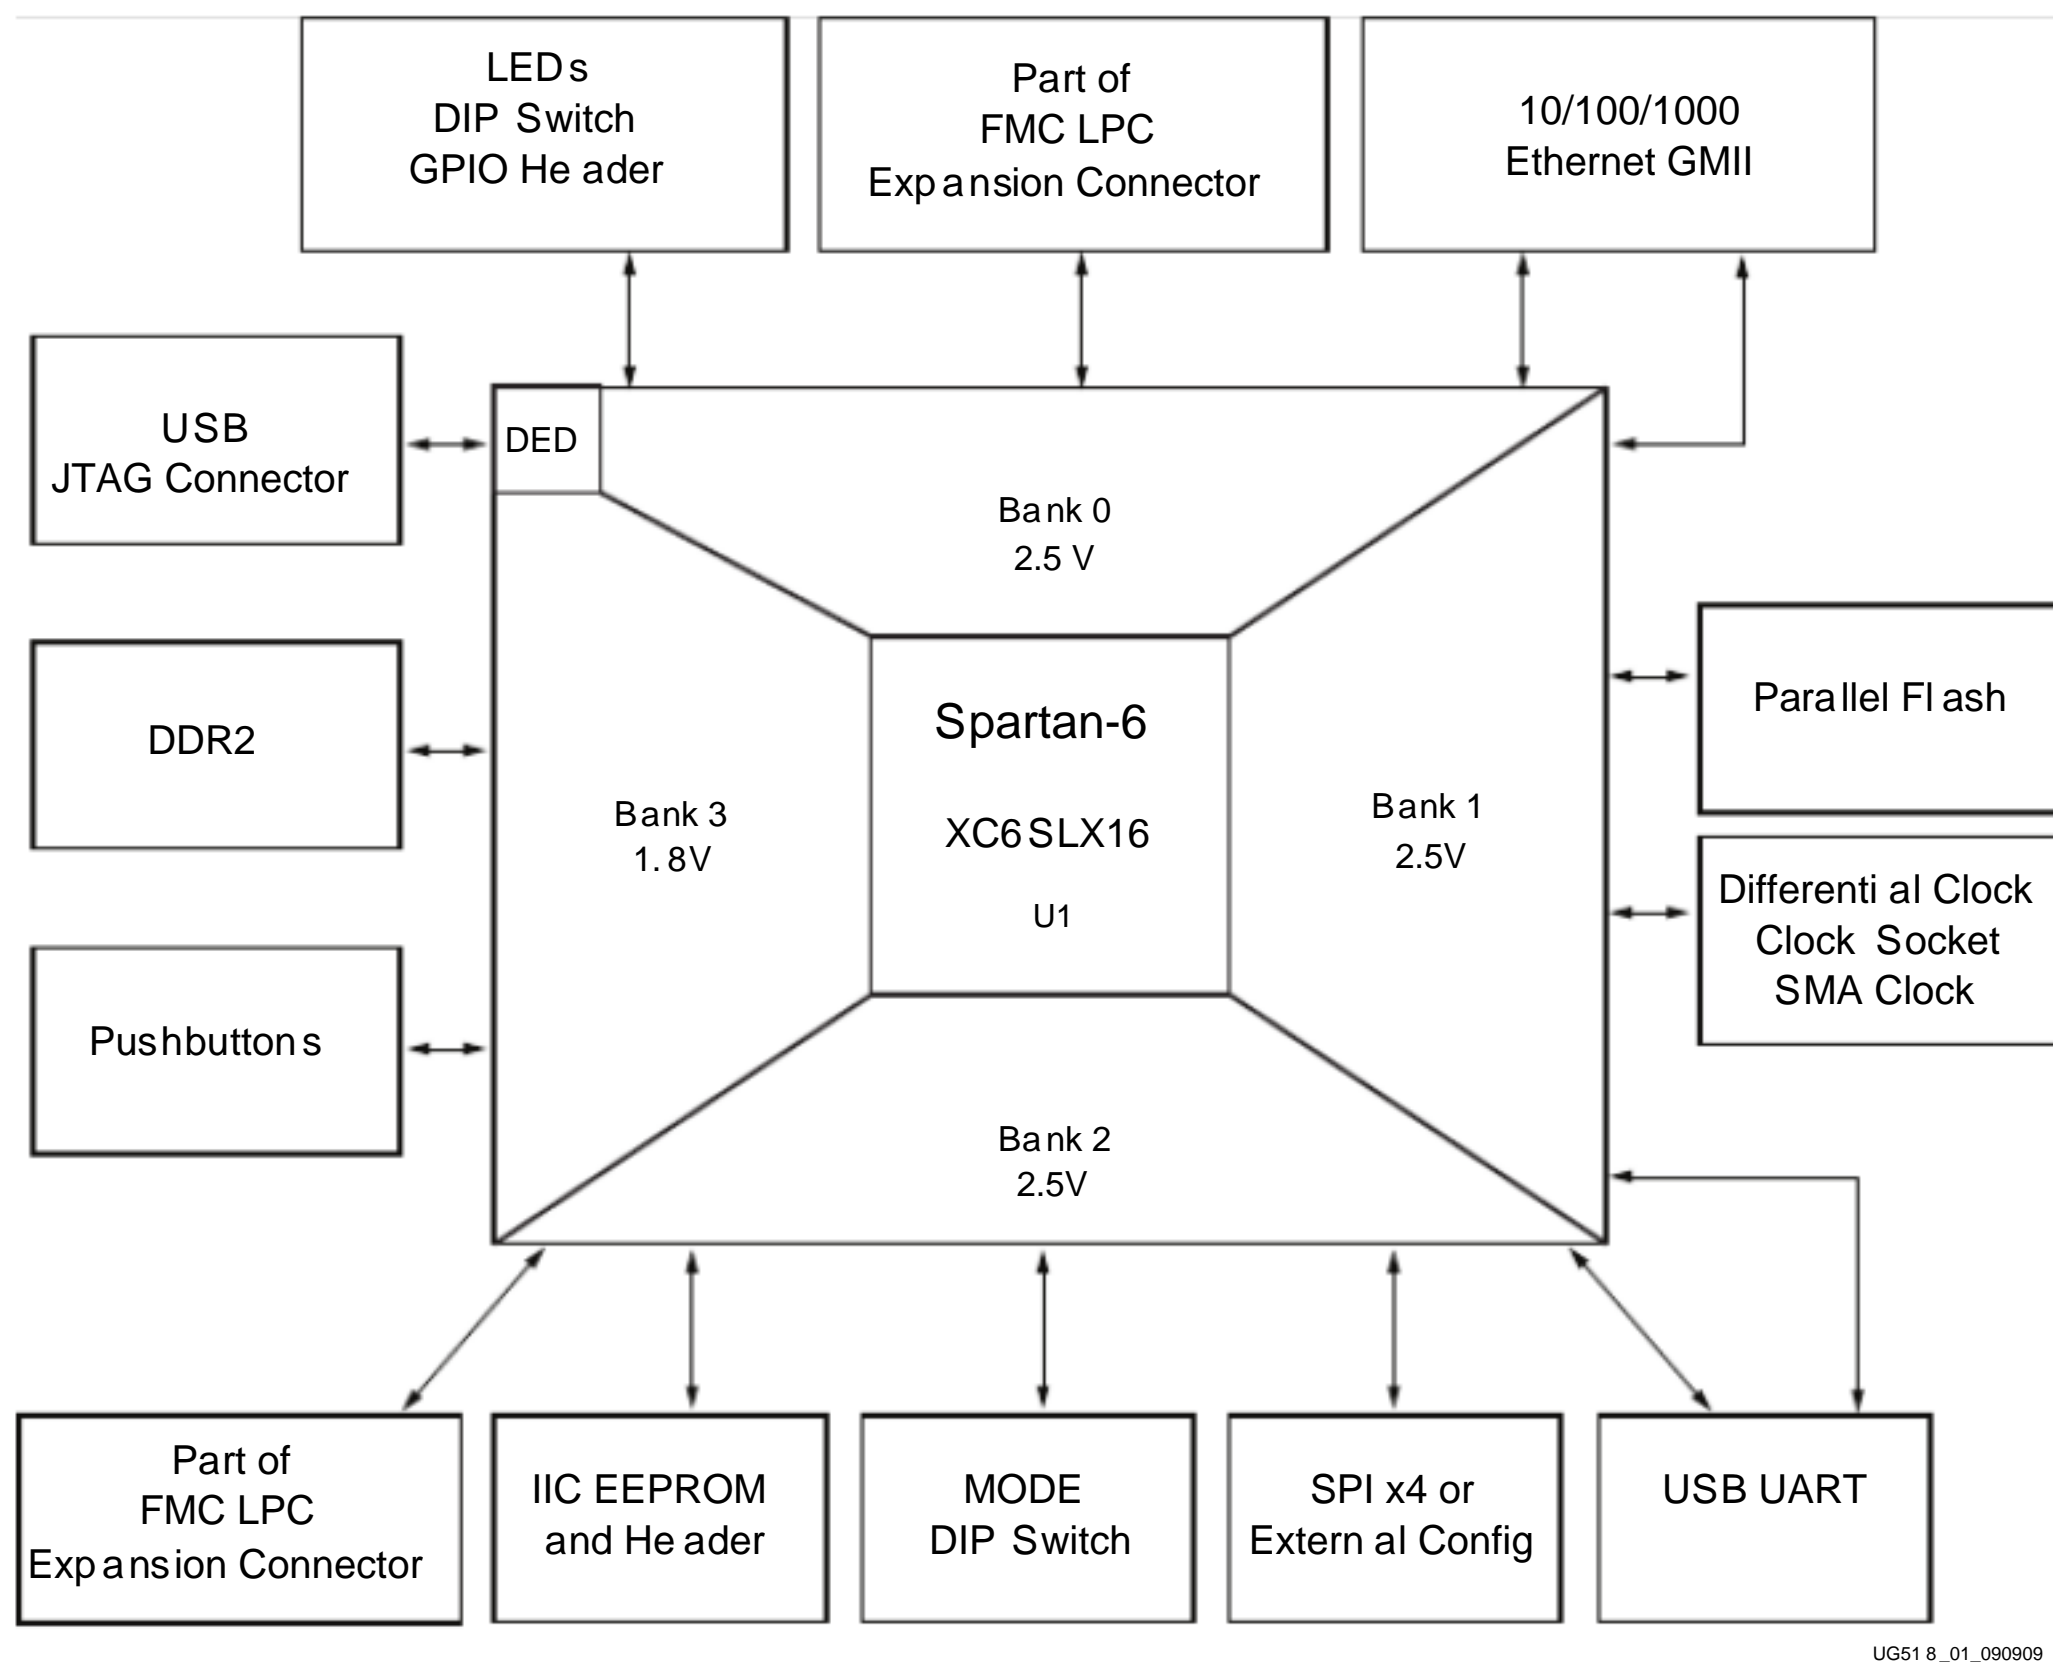

Figure 1-1:   SP601 Features and Banking

Related Xilinx Documents

Prior to using the SP601 Evaluation Board, users should be familiar with Xilinx resources. See the following locations for additional documentation on Xilinx tools and solutions:

Detailed Description

Figure 1-2 shows a board photo with numbered features corresponding to Table 1-1 and the section headings in this document.
Figure 1-2:   SP601 Board Photo

The numbered features in Figure 1-2 correlate to the features and notes listed in Table 1-1.

Table 1-1:   SP601 Features

Number	Feature	Notes	Schematic Page
1	Spartan-6 FPGA	XC6SLX16-2CSG 324	
2	DDR2 Component	Elpida EDE1116ACBG 1 Gb DDR2 SDRAM	5
3	SPI x4 Flash and Headers	SPI select and External Headers	8
4	Linear Flash BPI	StrataFlash 8-bit (J3 device), 3 pins shared w/ SPI x4	8

Table 1-1: SP601 Features (Cont'd)

Number	Feature	Notes	Schematic Page
5	10/100/1000 Ethernet PHY	GMII Marvell Alaska PHY	7
6	RS232 UART (USB Bridge)	Uses CP2103 Serial-to-USB connection	10
7	IIC	Goes to Header and VITA 57.1 FMC	10
8	Clock, socket, SMA	Differential, Single-Ended, Differential	9
9	VITA 57.1 FMC-LPC connector	LVDS signals, clocks, PRSNT	6
10	LEDs	Ethernet PHY Status	7
11	LED, Header	FPGA Awake LED, Suspend Header	8
12	LEDs	FPGA INIT, DONE	9
13	LED	User I/O (active-High)	9
	DIP Switch	User I/O (active-High)	9
	Pushbutton	User I/O, CPU_RESET (active-High)	9
	12-pin (8 I/O) Header	6 pins x 2 male header with 8 I/Os (active-High)	10
14	Pushbutton	FPGA_PROG_B	9
15	USB JTAG	Cypress USB to JTAG download cable logic	14, 15
16	Onboard Power	Power Management	11,12,13

1. Spartan-6 XC6SLX16-2CSG324 FPGA

A Xilinx Spartan-6 XC6SLX16-2CSG324 FPGA is installed on the SP601 Evaluation Board.

References

See the Spartan-6 FPGA Data Sheet. [Ref 1]

Configuration

The SP601 supports configuration in the following modes:

? Master SPI x4

? Master SPI x4 with off-board device

? BPI

? JTAG (using the included USB-A to Mini-B cable)

For details on configuring the FPGA, see 15. Configuration Options.

The Mode DIP switch SW2 is set to M[1:0] = 01 Master SPI default.

References

See the Spartan-6 FPGA Configuration User Guide for more information. [Ref 2]

I/O Voltage Rails

There are four available banks on the LX16-CSG324 device. Banks 0, 1, and 2 are connected for 2.5V I/O. Bank 3 is used for the 1.8V DDR2 component memory interface of Spartan-6 FPGA's hard memory controller. The voltage applied to the FPGA I/O banks used by the SP601 board is summarized in   Table 1-2.

Table 1-2:   I/O Voltage Rail of FPGA Banks

FPGA Bank	I/O Voltage Rail
0	2.5V
1	2.5V
2	2.5V
3	1.8V

http://www.xilinx.com/support/documentation/spartan-6.htm   .

2. 128 MB DDR2 Component Memory

There are 128 MB of DDR2 memory available on the   SP601 board. A 1-Gb Elpida EDE1116ACBG (84-ball) DDR2 memory component is accessible through Bank 3 of the LX16 device. The Spartan-6 FPGA hard memory controller is used for data transfer across the DDR2 memory interface   's 16-bit data path using SSTL18 signaling. The SP601 board supports the   " standard   " VCCINT setting of 1.20V   ± 5%. This setting provides the standard memory controller block (MCB) performance of 625   Mb/s for DDR2 memory in a -2 speed grade device. Signal integrity is maintained through DDR2 resistor terminations and memory on-die terminations (ODT), as shown in   Table 1-3 and Table 1-4.

Table 1-3:   Termination Resistor Requirements

Signal Name	Board Termination	On-Die Termination
DDR2_A[14:0]	49.9 to V$_{TT}$	
DDR2_BA[2:0]	49.9 to V$_{TT}$	
DDR2_RAS_N	49.9 to V$_{TT}$	
DDR2_CAS_N	49.9 to V$_{TT}$	
DDR2_WE_N	49.9 to V$_{TT}$	
DDR2_CS_N	100 to GND	
DDR2_CKE	4.7K to GND	
DDR2_ODT	4.7K to GND	
DDR2_DQ[15:0]		ODT
DDR2_UDQS[P ,N], DDR2_LDQS[P ,N]		ODT
DDR2_UDM, DDR2_LDM		ODT

Table 1-3:   Termination Resistor Requirements   (Cont ' d)

Signal Name	Board Termination	On-Die Termination
DDR2_CK[P ,N]	100 differential at memory component	

Notes:

1.   Nominal value of V   TT for DDR2 interface is 0.9V   .

Table 1-4:   FPGA On-Chip (OCT) Termination External Resistor Requirements

FPGA U1 Pin	FPGA Pin Number	Board Connection for OCT
ZIO	L6	No Connect
RZQ	C2	100 to GROUND

3. SPI x4 Flash

The Xilinx Spartan-6 FPGA hosts a SPI interface which is accessible to the Xilinx iMPACT configuration tool. The SPI memory device operates at 3.0V; the Spartan-6 FPGA I/Os are 3.3V tolerant and provide electrically compatible logic levels to directly access the SPI flash through a 2.5V bank. The XC6SLX16-2CSG324 is a master device when accessing an external SPI flash memory device.

The SP601 SPI interface has two parallel connected configuration options (see Figure 1-4): an SPI X4 (Winbond W25Q64VSFIG) 64-Mb flash memory device and a flash programming header (J12). J12 supports a user-defined SPI mezzanine board. The SPI configuration source is selected via SPI select jumper J15. For details on configuring the FPGA, see 15. Configuration Options .

4. Linear Flash BPI

An 8-bit (16 MB) Numonyx linear flash memory (TE28F128J3D-75) (J3D type) is used to provide non-volatile bitstream, code, and data storage. The J3D devices operate at 3.0V; the Spartan-6 FPGA I/Os are 3.3V tolerant and provide electrically compatible logic levels to directly access the linear flash BPI through a 2.5V bank. For details on configuring the FPGA, see 15. Configuration Options .

5. 10/100/1000 Tri-Speed Ethernet PHY

The SP601 uses the onboard Marvell Alaska PHY device (88E1111) for Ethernet communications at 10, 100, or 1000 Mb/s. The board supports a GMII/MII interface from the FPGA to the PHY. The PHY connection to a user-provided Ethernet cable is through a Halo HFJ11-1G01E RJ-45 connector with built-in magnetics.

On power-up, or on reset, the PHY is configured to operate in GMII mode with PHY address 0b00111 using the settings shown in Table 1-8. These settings can be overwritten via software commands passed over the MDIO interface.

Table 1-8:   PHY Configuration Pins

Pin	Connection on Board	Bit[2] Definition and Value	Bit[1] Definition and Value	Bit[0] Definition and Value
CFG0	V_{CC} 2.5V	PHYADR[2] = 1	PHYADR[1] = 1	PHYADR[0] = 1
CFG1	Ground	ENA_PAUSE = 0	PHYADR[4] = 0	PHYADR[3] = 0
CFG2	V_{CC} 2.5V	ANEG[3] = 1	ANEG[2] = 1	ANEG[1] = 1
CFG3	V_{CC} 2.5V	ANEG[0] = 1	ENA_XC = 1	DIS_125 = 1

6. USB-to-UART Bridge

The SP601 contains a Silicon Labs CP2103GM USB-to-UART bridge device (U4) which allows connection to a host computer with a USB cable. The USB cable is supplied in this evaluation kit (Type A end to host computer, Type Mini-B end to SP601 connector J9). Table 1-10 details the SP601 J9 pinout.

Xilinx UART IP is expected to be implemented in the FPGA fabric. The FPGA supports the USB-to-UART bridge using four signal pins, transmit (TX), receive (RX), Request to Send (RTS), and Clear to Send (CTS).

Silicon Labs provides royalty-free Virtual COM Port (VCP) drivers which permit the CP2103GM USB-to-UART bridge to appear as a COM port to host computer communications application software (for example, HyperTerm or TeraTerm). The VCP device driver must be installed on the host PC prior to establishing communications with the SP601. Refer to the   SP601 Getting Started Guide   for driver installation instructions.

Table 1-10:   USB Type B Pin Assignments and Signal Definitions

USB Connector Pin	Signal Name	Description
1	VBUS	+5V from host system (not used)
2	USB_DATA_N	Bidirectional differential serial data (N-side)
3	USB_DATA_P	Bidirectional differential serial data (P-side)
4	GROUND	Signal ground

7. IIC Bus

The SP601 IIC bus hosts four items:

? FPGA U1 IIC interface

? 2-pin IIC external access header

? 8-Kb NV Memory

? VITA 57.1 FMC Connector J1

The SP601 IIC bus topology is shown in   Figure 1-6.
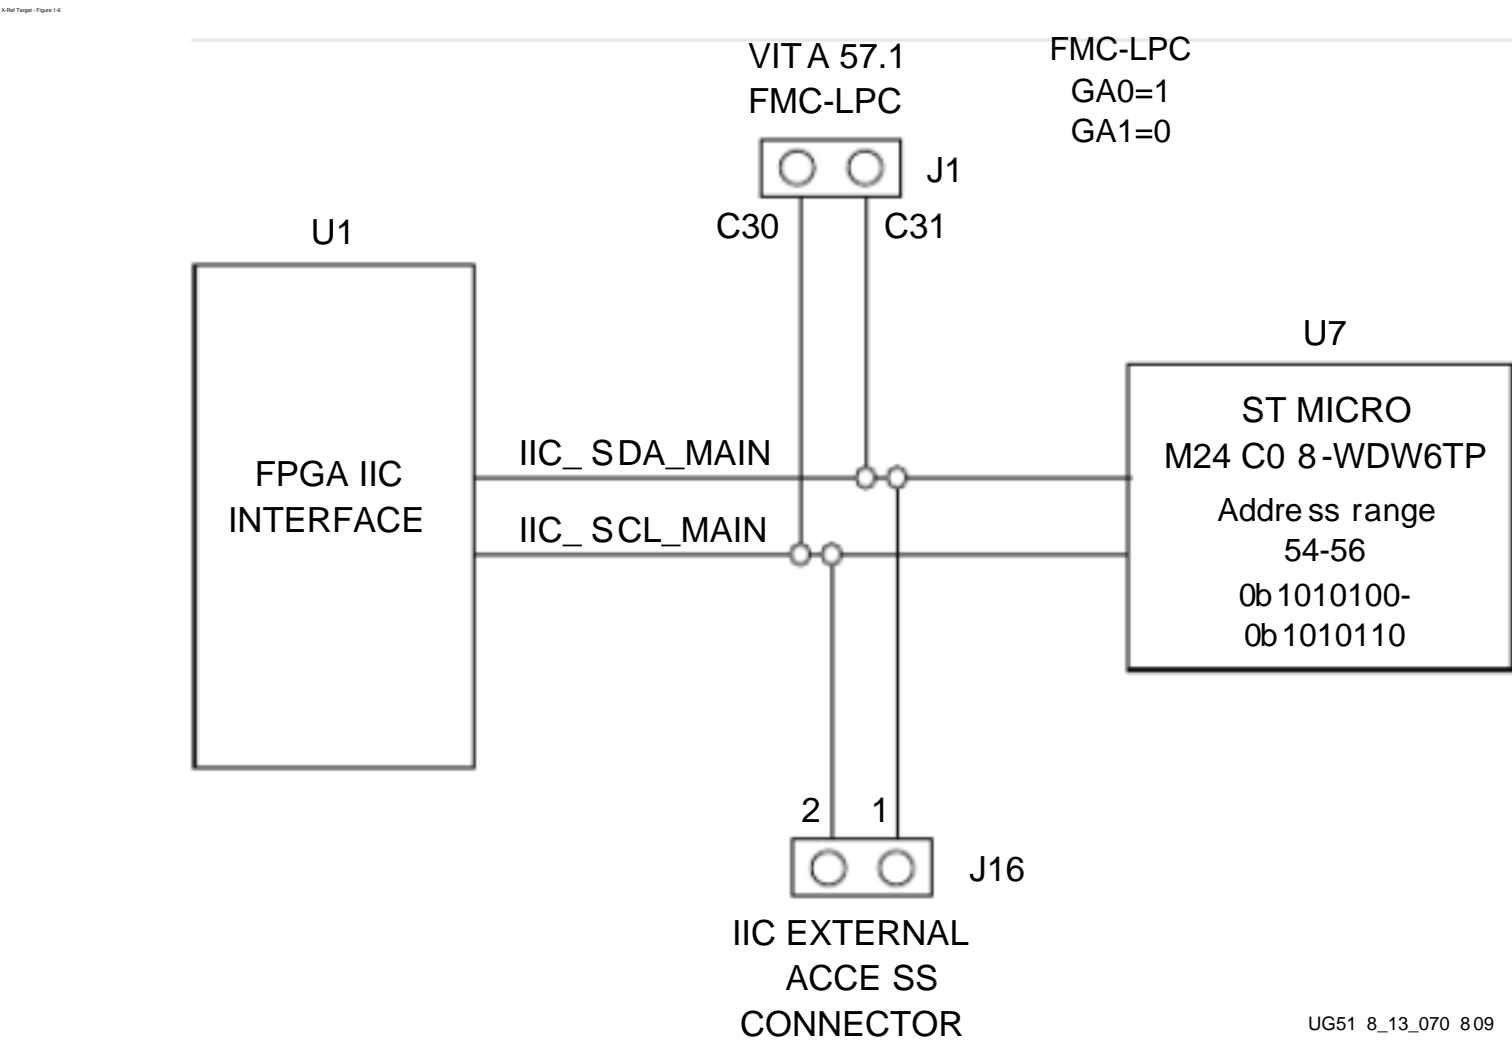

Figure 1-6:   IIC Bus Topology

The IIC Bus on the SP601 provides access to a 2-pin header, the onboard 8-Kb EEPROM, and the VITA 57.1 FMC interface. The user must ensure there are no IIC address conflicts with the onboard EEPROM address when attaching additional IIC devices via FMC or the IIC 2-pin header. Note that FMC Mezzanine cards are designed with 2-Kb IIC EEPROMs and will not conflict with the Carrier Card (SP601) 8-Kb EEPROM address range. This is because 2-Kb EEPROMs reside below the 8-Kb EEPROM space. See the VITA 57.1 specification along with any IIC 2-Kbit EEPROM data sheet for more details.

8-Kb NV Memory

The SP601 hosts a 8-Kb ST Microelectronics M24C08-WDW6TP IIC parameter storage memory device (U7). The IIC address of U7 is 0b1010100, and U7 is not write protected (WP pin 7 is tied to GND).

Table 1-12:   IIC Memory Connections

FPGA U1 Pin	Schematic Net Name	SPI Memory U7	
		Pin Number	Pin Name
Not Applicable	Tied to GND	1	A0
Not Applicable	Tied to GND	2	A1

Table 1-12: IIC Memory Connections (Cont'd)

FPGA U1 Pin	Schematic Net Name	SPI Memory U7	
		Pin Number	Pin Name
Not Applicable	Pulled up (0) to VCC3V3	3	A2
N10	IIC_SDA_MAIN	5	SDA
P11	IIC_SCL_MAIN	6	SCL
Not Applicable	Tied to GND	7	WP

8. Clock Generation

There are three clock sources available on the SP601.

Oscillator (Differential)

The SP601 has one 2.5V LVDS differential 200 MHz oscillator (U5) soldered onto the board and wired to an FPGA global clock input.

? Crystal oscillator: SiTime SiT9102AI-243N25E200.00000

? PPM frequency stability: 50 ppm

References

See the SiTime SiT9102 Data Sheet for more information. [Ref 14]

Oscillator Socket (Single-Ended, 2.5V or 3.3V)

One populated single-ended clock socket (X2) is provided for user applications. The option of 3.3V or 2.5V power may be selected via a 0 resistor selection. The SP601 board is shipped with a 27 MHz 2.5V oscillator installed.

Figure 1-7 shows the unpopulated user oscillator socket, indicating the socket pin 1 location. Figure 1-8 shows the oscillator installed, indicating its pin 1 location.
Figure 1-7: SP601 Oscillator Socket Pin 1 Location Identifiers
Figure 1-8: SP601 Oscillator Pin 1 Location Identifiers

SMA Connectors (Differential)

A high-precision clock signal can be provided to the FPGA using differential clock signals through the onboard 50 SMA connectors J8 (N) and J7 (P).

Table 1-13: SP601 Clock Source Connections

Source	FPGA U1 Pin	Schematic Net Name	Pin Number	Pin Name
U5 200 MHz OSC	K16	SYSCLK_N	5	OUT_B
	K15	SYSCLK_P	4	OUT
X2 27 MHz OSC	V10	USER_CLOCK	5	OUT
USER_SMA_CLOCK	H18	SMACLK_N	J8.1	-
SMA Connectors	H17	SMACLK_P	J7.1	-

9. VITA 57.1 FMC-LPC Connector

The VITA 57.1 FMC expansion connector (J1) on the   SP601 implements the VITA 57.1.1 LPC format of the VITA 57.1 FMC standard specification. The VITA 57.1 FMC-LPC connector provides 68 single-ended (34 differential) user-defined signals. The VITA 57.1 FMC standard calls for two connector densities: a High Pin Count (HPC) and a Low Pin Count (LPC) implementation. A common 10 x 40 position (400 pin locations) connector form factor is used for both versions. The HPC version has 400 pins present, the LPC version, 160 pins. The Samtec connector system is rated for signaling speeds up to 9   GHz (18 Gb/s) based on a -3dB insertion loss point within a two-level signaling environment. Refer to the Samtec website   for data sheets and characterization information for the RoHS-compliant VITA 57.1 FMC-LPC connector (ASP-134603-01) and its mate.

Note: The SP601 board VADJ voltage for the FMC LPC connector (J1) is fixed at 2.5V (non-adjustable). The 2.5V rail cannot be turned off. The FMC LPC J1 connector is a keyed connector oriented so that a plug-on card faces   away from the SP601 board. The SP601 VIT   A 57.1 FMC interface is compatible with 2.5V mezzanine cards capable of supporting 2.5V VADJ.

Table 1-14 shows the VITA 57.1 FMC LPC connections. The connector pinout is in Appendix   B, VITA 57.1 FMC LPC Connector Pinout   .

Any signal named FMC_HPC_xxxx that is wired between a U1 FPGA pin and some other device does not appear in this table.

The SP601 supports all FMC LA Bus connections available on the FMC LPC connector, (LA[00:33]) along with all available FMC M2C clock pairs (CLK0_M2C_P/N and CLK1_M2C_P/N). The SP601 does not support the FMC DP Bus connections since the SP601 does not support any Gigabit Transceivers on the FMC DP Bus. Therefore, DP0_C2M_P/N, DP0_M2C_P/N and GBTCLK0_M2C_P/N are not supported by the SP601 FMC interface.

For more details about FMC, see the VITA57.1 specification available at http://www.vita.com/fmc.html   .

Table 1-14:   VITA 57.1 FMC LPC Connections

10. Status LEDs

Table 1-16 defines the status LEDs.

Table 1-16: Status LEDs

Reference Designator	Signal Name	Color	Label	Description
DS1	FMC_PWR_GOOD_FLASH_RST_B	Green	PWR GOOD	Indicates power available for VITA 57.1 FMC expansion connector.
DS2	PHY_LED_LINK10	Green	10	Indicates link speed 10 Mb/s.
DS3	PHY_LED_LINK100	Green	100	Indicates link speed 100 Mb/s.
DS4	PHY_LED_LINK1000	Green	1000	Indicates link speed 1 Gb/s.
DS5	PHY_LED_DUPLEX	Green	DUP	Indicates duplex data.
DS6	PHY_LED_RX	Green	RX	Indicates RX data activity.
DS7	PHY_LED_TX	Green	TX	Indicates TX data activity.
DS8	FPGA_AWAKE	Green	AWAKE	FPGA is not in low-power suspend mode.
DS9	FPGA_DONE	Green	DONE	Illuminates to indicate the status of the DONE pin when the FPGA is successfully configured.
DS10	FPGA_INIT	Red	INIT	Illuminates after power-up to indicate that the FPGA has successfully powered up and completed its internal power-on process.
DS15	VCC5	Green		Illuminates when 5V supply is applied.
DS16	LED_GRN, LED_RED	Green/ Red	STATUS	USB to JTAG logic.
DS17	LTC_PWR_GOOD	Green		Illuminates to indicate that the board power is good.

11. FPGA Awake LED and Suspend Jumper

The suspend mode jumper permits the FPGA to enter an inactive, "suspend" mode. The FPGA Awake LED DS8 will go out when the FPGA enters this mode.

Figure 1-9:   FPGA Awake LED and Suspend Jumper

Table 1-17:   FPGA Awake/Suspend Mode Jumper Connections

FPGA U1 Pin	Schematic Net Name	Suspend Mode I/O
P15	FPGA_AWAKE	Awake LED DS8.2
R16	FPGA_SUSPEND	Suspend J14.2

See the Spartan-6 FPGA Power Management User Guide   for more information.   [Ref 10]

12. FPGA INIT and DONE LEDs

The typical Xilinx FPGA power up and configuration status LEDs are present on the SP601. The INIT LED DS10 comes on after the FPGA powers up and completes its internal power-on process. The DONE LED DS9 comes on after the FPGA programming bitstream has been downloaded and the FPGA successfully configured.

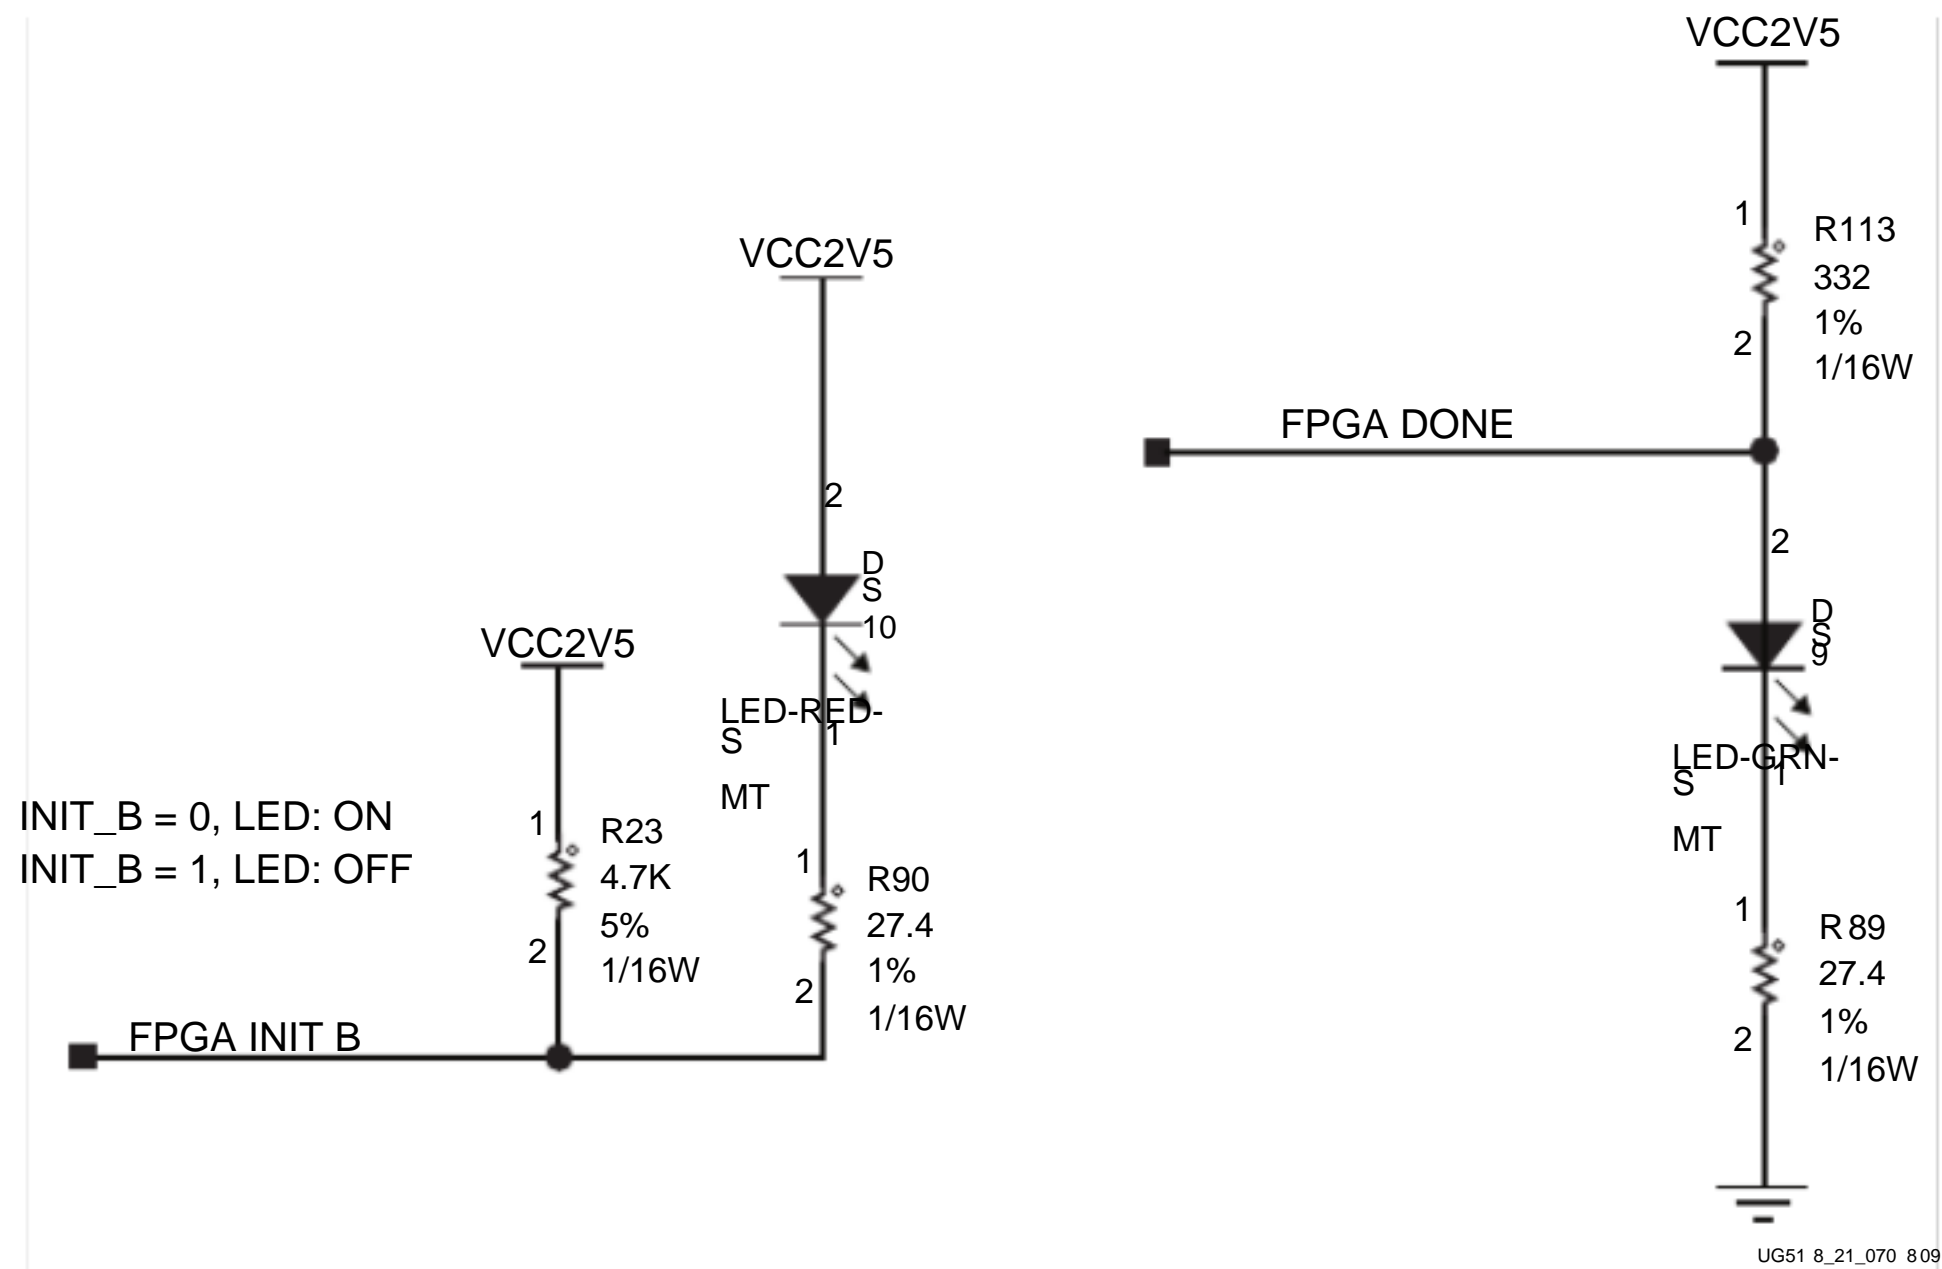

Figure 1-10: FPGA INIT and DONE LEDs

Table 1-18: FPGA INIT and DONE LED Connections

FPGA U1 Pin	Schematic Net Name	Controlled LED
U3	FPGA_INIT_B	DS10 INIT
V17	FPGA_DONE	DS9 DONE

13. User I/O

The SP601 provides the following user and general purpose I/O capabilities:

? User LEDs

? User DIP switch

? Pushbutton switches

? CPU Reset pushbutton switch

? GPIO male pin header

User LEDs

The SP601 provides four active high, green LEDs, as described in Figure 1-11 and Table 1-19.
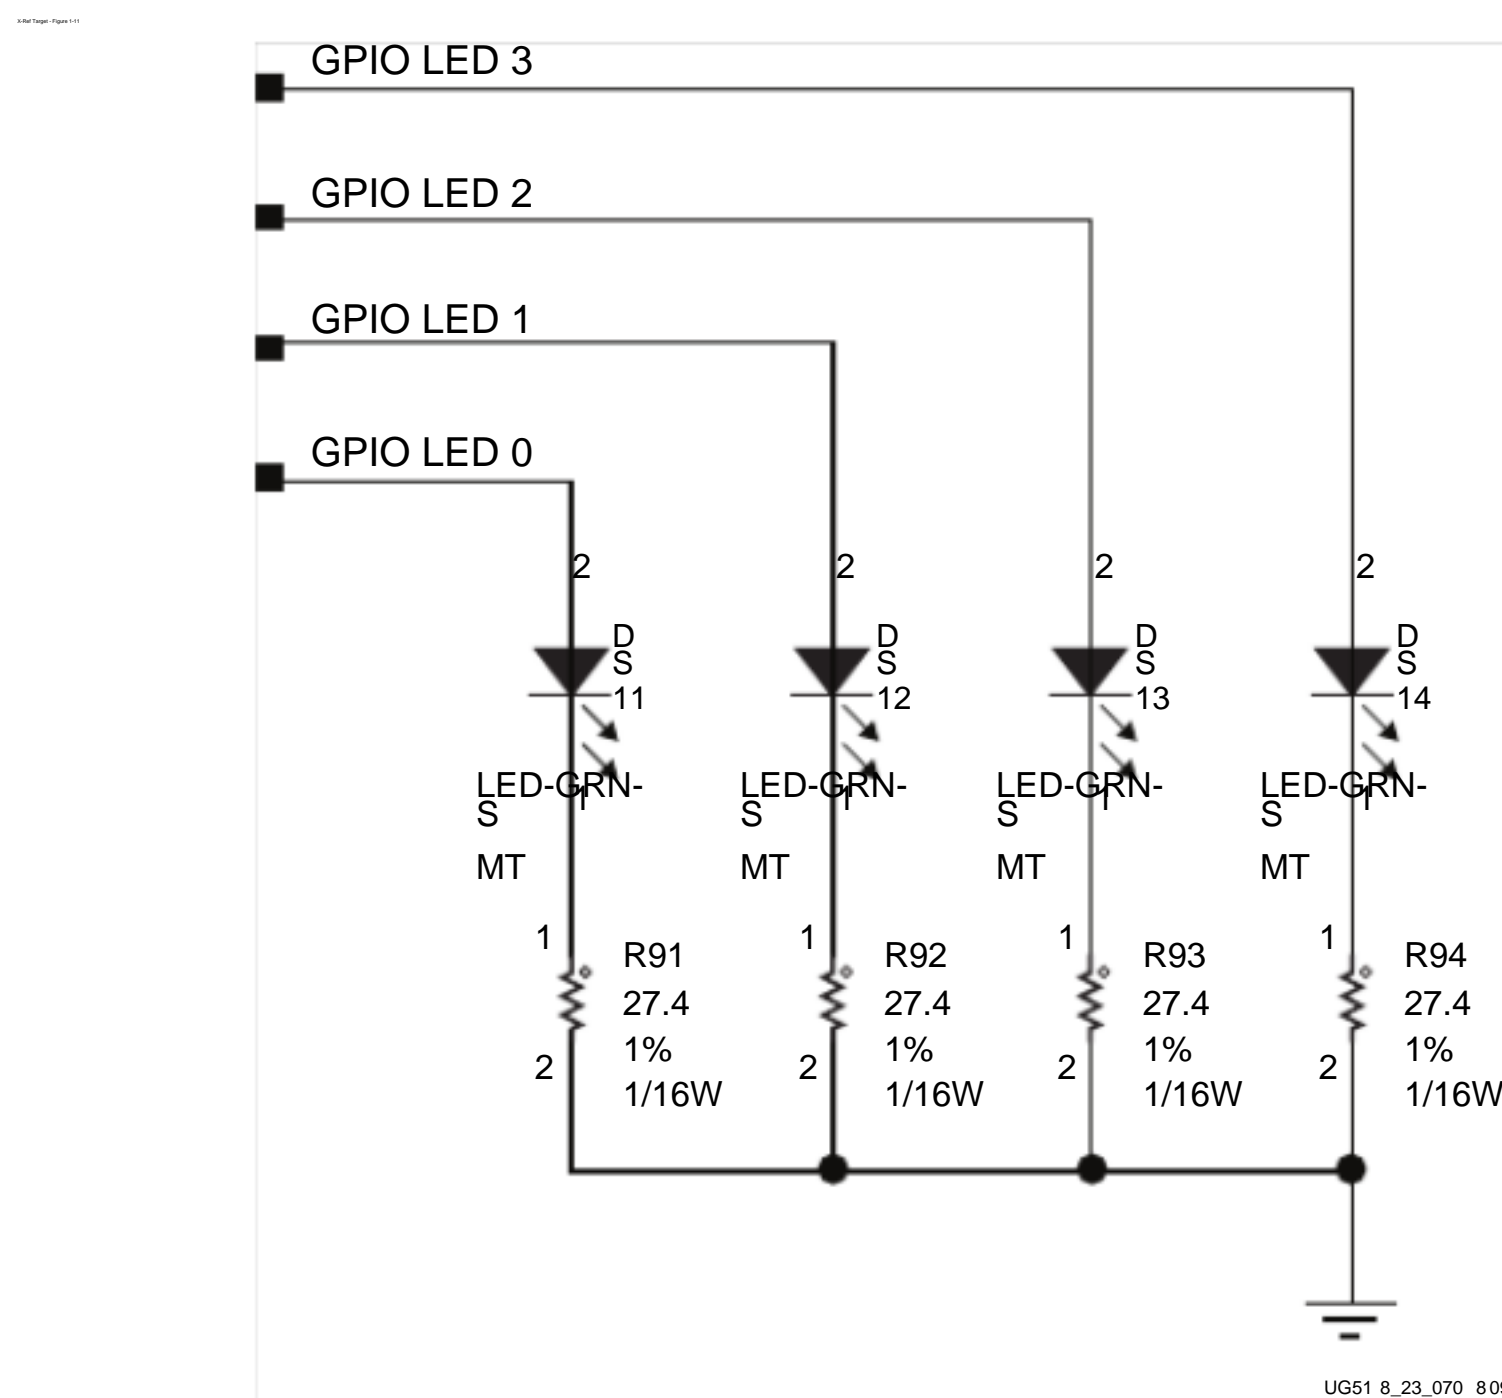

Figure 1-11: User LEDs

Table 1-19: User LEDs

Reference Designator	Signal Name	Color	Label	FPGA Pin
DS11	GPIO_LED_0	Green		E13
DS12	GPIO_LED_1	Green		C14

Table 1-19: User LEDs (Cont'd)

Reference Designator	Signal Name	Color	Label	FPGA Pin
DS13	GPIO_LED_2	Green		C4
DS14	GPIO_LED_3	Green		A4

User DIP switch

The SP601 includes an active high four pole DIP switch, as described in Figure 1-12 and Table 1-20.
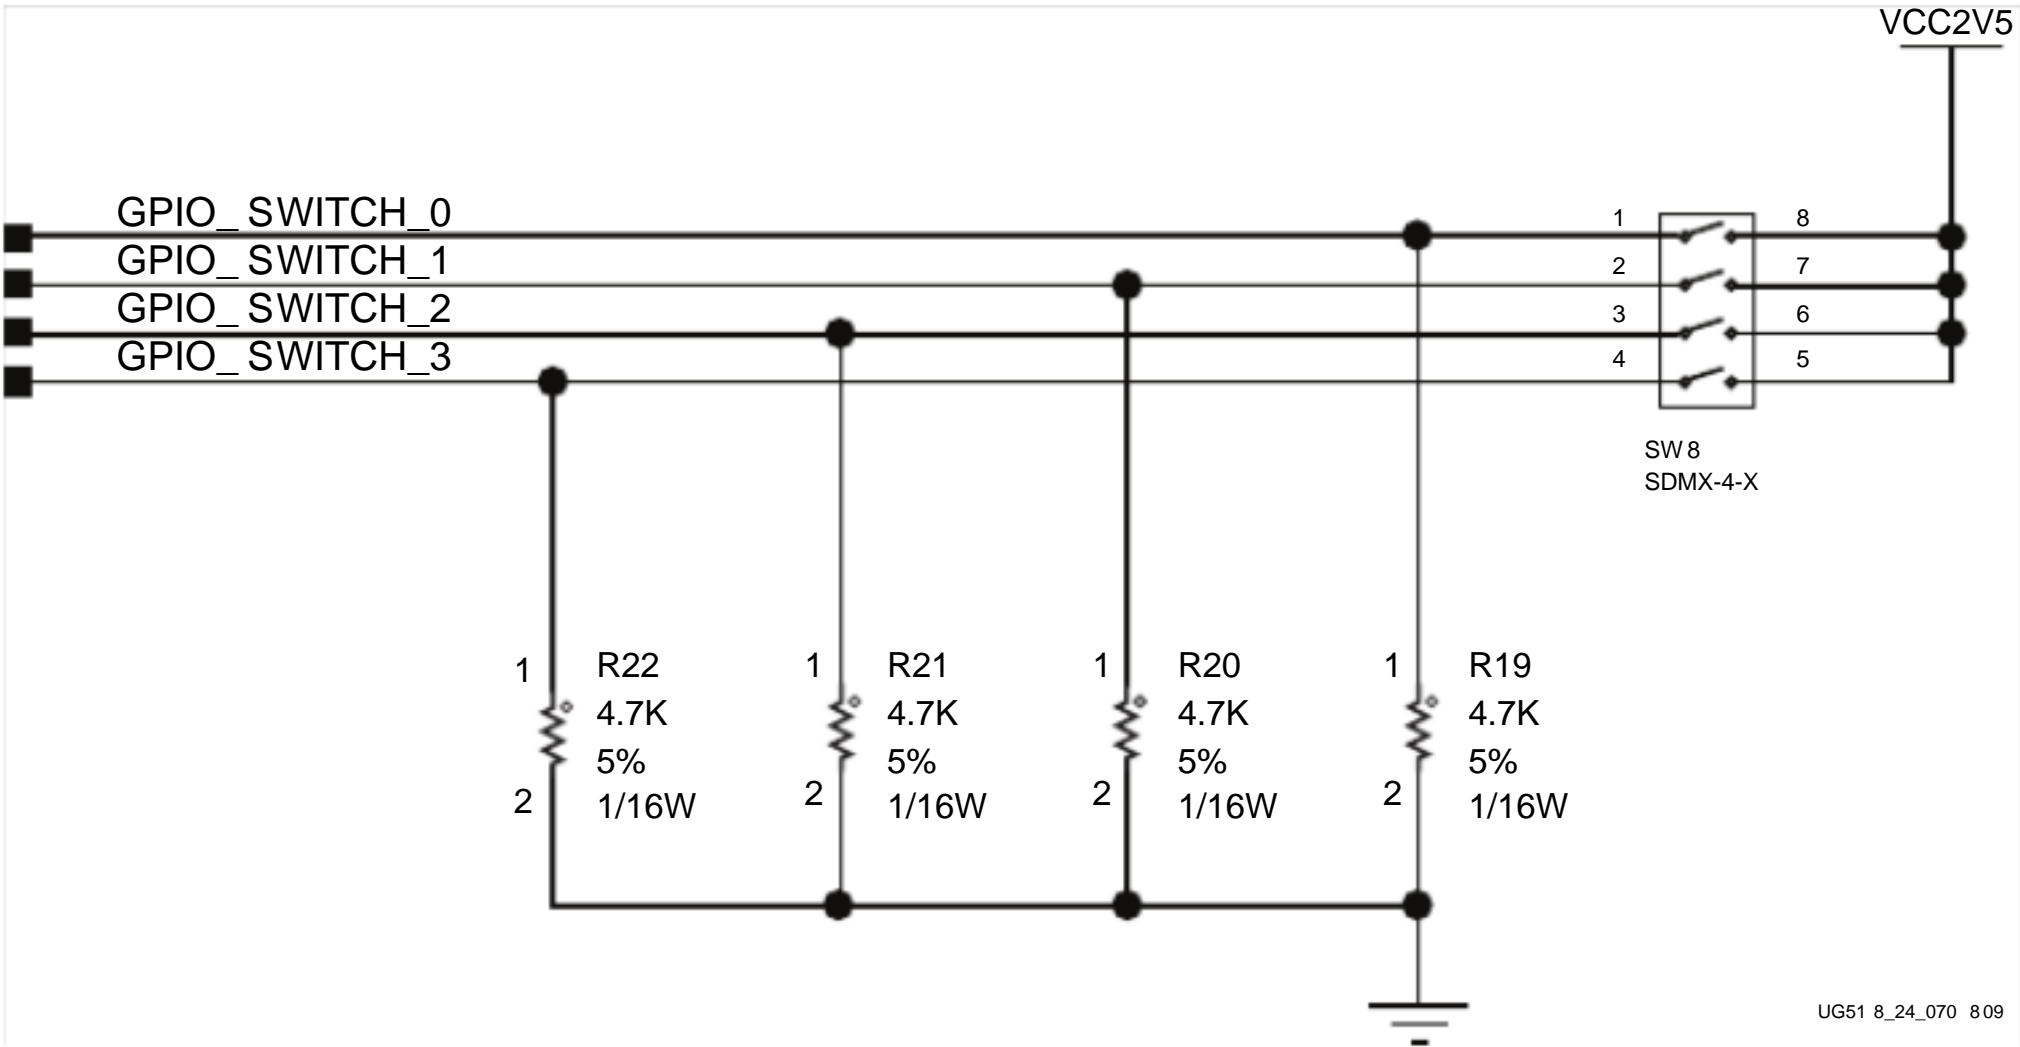

Figure 1-12: User DIP Switch

Table 1-20: User DIP Switch Connections

FPGA U1 Pin	Schematic Net Name	SW8 Pin Number
D14	GPIO_SWITCH_0	1
E12	GPIO_SWITCH_1	2
F12	GPIO_SWITCH_2	3
V13	GPIO_SWITCH_3	4

User Pushbutton Switches

The SP601 provides five active high pushbutton switches: SW6, SW4, SW5, SW7 and SW9. The five pushbuttons all have the same topology as the sample shown in Figure 1-13. Four pushbuttons are assigned as GPIO, and the fifth is assigned as a CPU_RESET. Figure 1-13 and Table 1-21 describe the pushbutton switches.

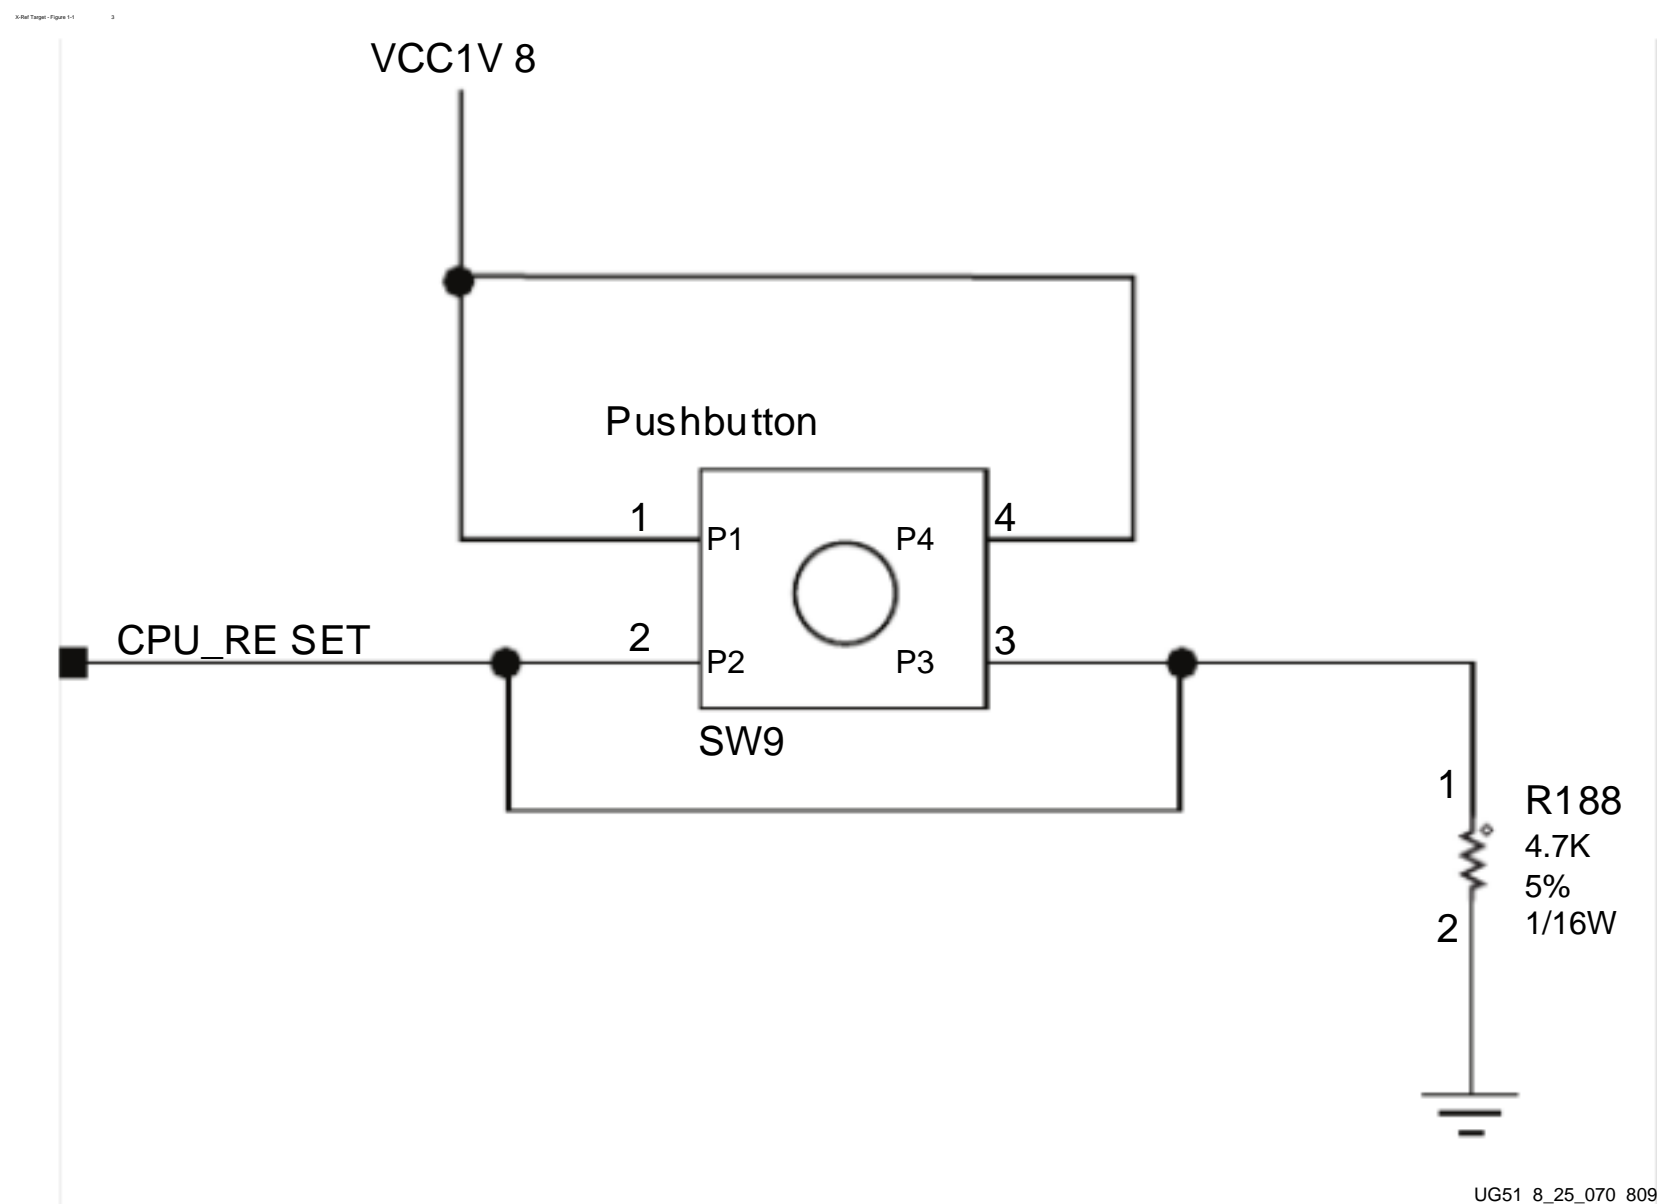

Figure 1-13: User Pushbutton Switch (Typical)

Table 1-21: Pushbutton Switch Connections

FPGA U1 Pin	Schematic Net Name	Switch Pin
P4	GPIO_BUTTON_0	SW6.2
F6	GPIO_BUTTON_1	SW4.2
E4	GPIO_BUTTON_2	SW5.2
F5	GPIO_BUTTON_3	SW7.2
N4	CPU_RESET	SW9.2

GPIO Male Pin Header

The SP601 provides a 2X6 GPIO male pin header supporting 3.3V power, GND and eight
I/Os which support LVCMOS25 signaling.   Figure 1-14 and Table 1-22 describe the J13
GPIO Male Pin Header.

Note: I/Os connected to J1   3 are powered by 2.5V   .
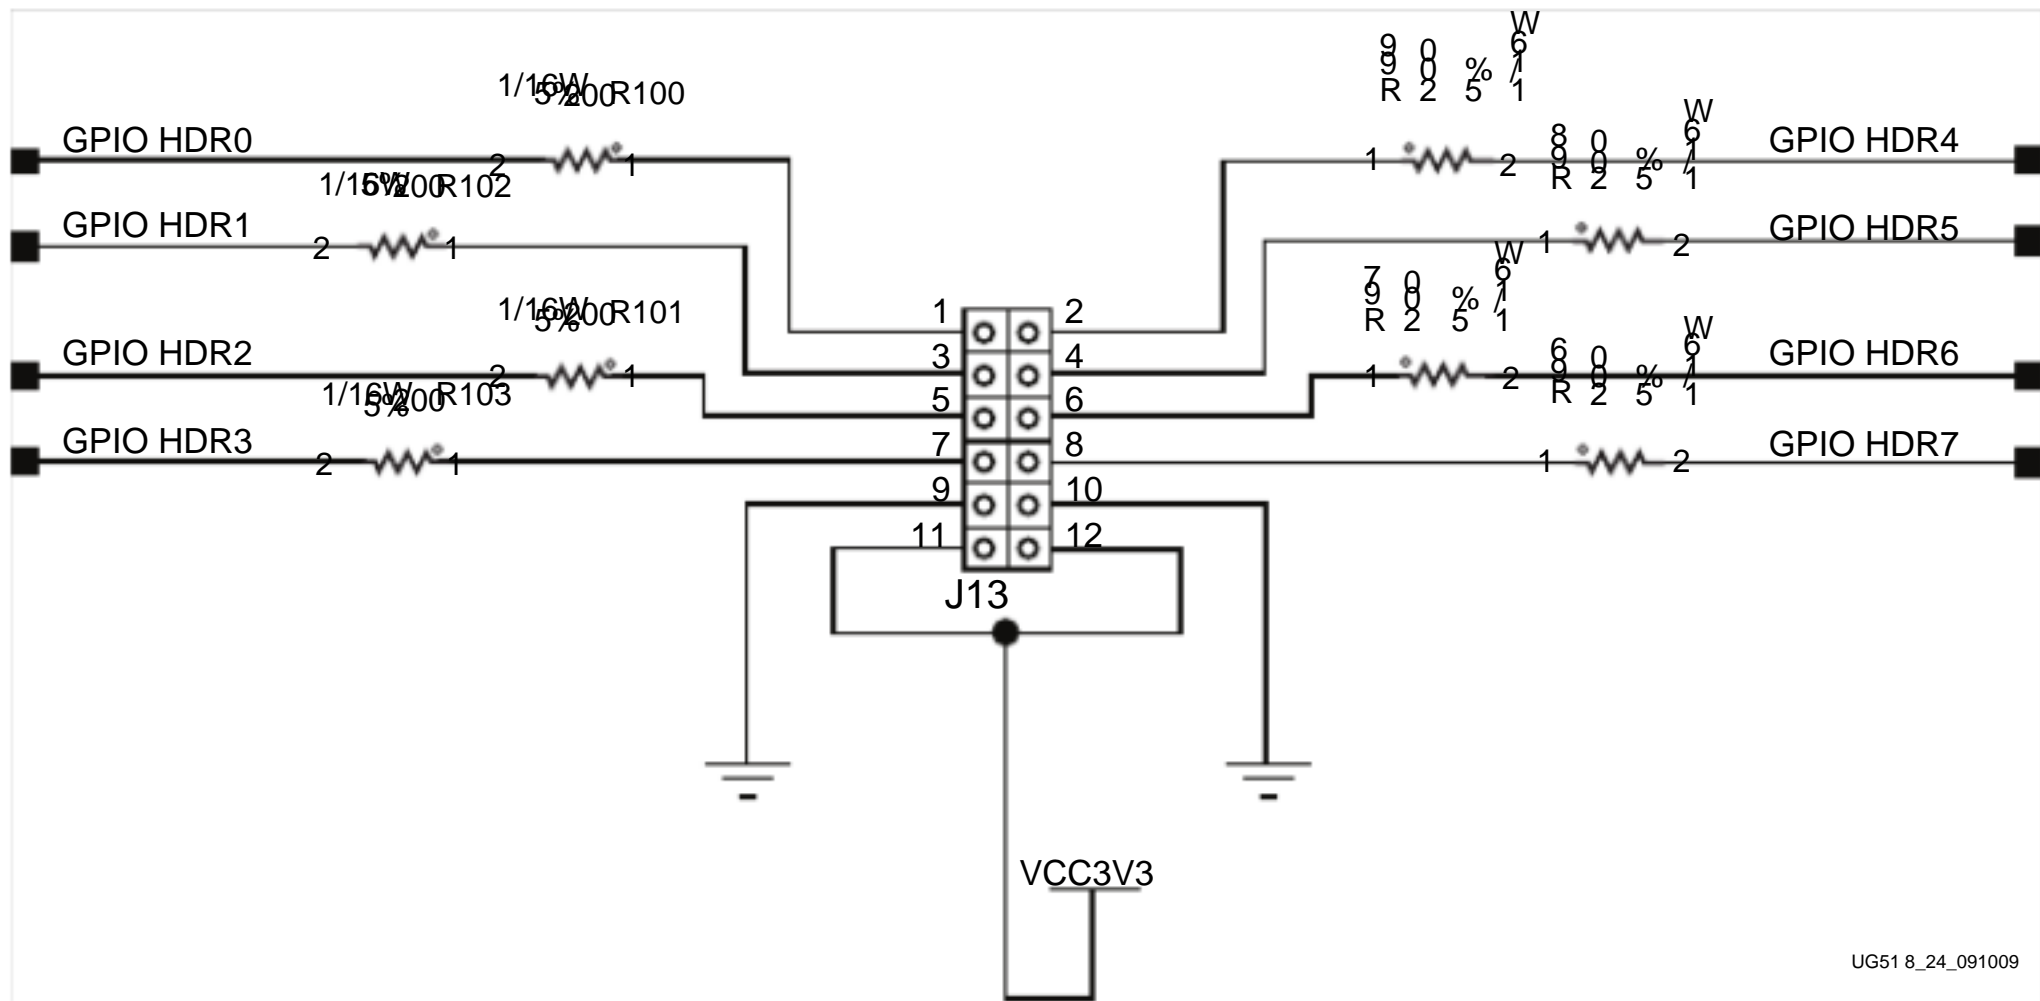

Figure 1-14:   GPIO Male Pin Header Topology

Table 1-22:   GPIO Header Pins

FPGA U1 Pin	Signal Name	J13 Pin
N17	GPIO_HDR0	1
M18	GPIO_HDR1	3
A3	GPIO_HDR2	5
L15	GPIO_HDR3	7
F15	GPIO_HDR4	2
B4	GPIO_HDR5	4
F13	GPIO_HDR6	6
P12	GPIO_HDR7	8

14. FPGA_PROG_B Pushbutton Switch

The SP601 provides one dedicated, active low FPGA_PROG_B pushbutton switch, as shown in   Figure 1-15.

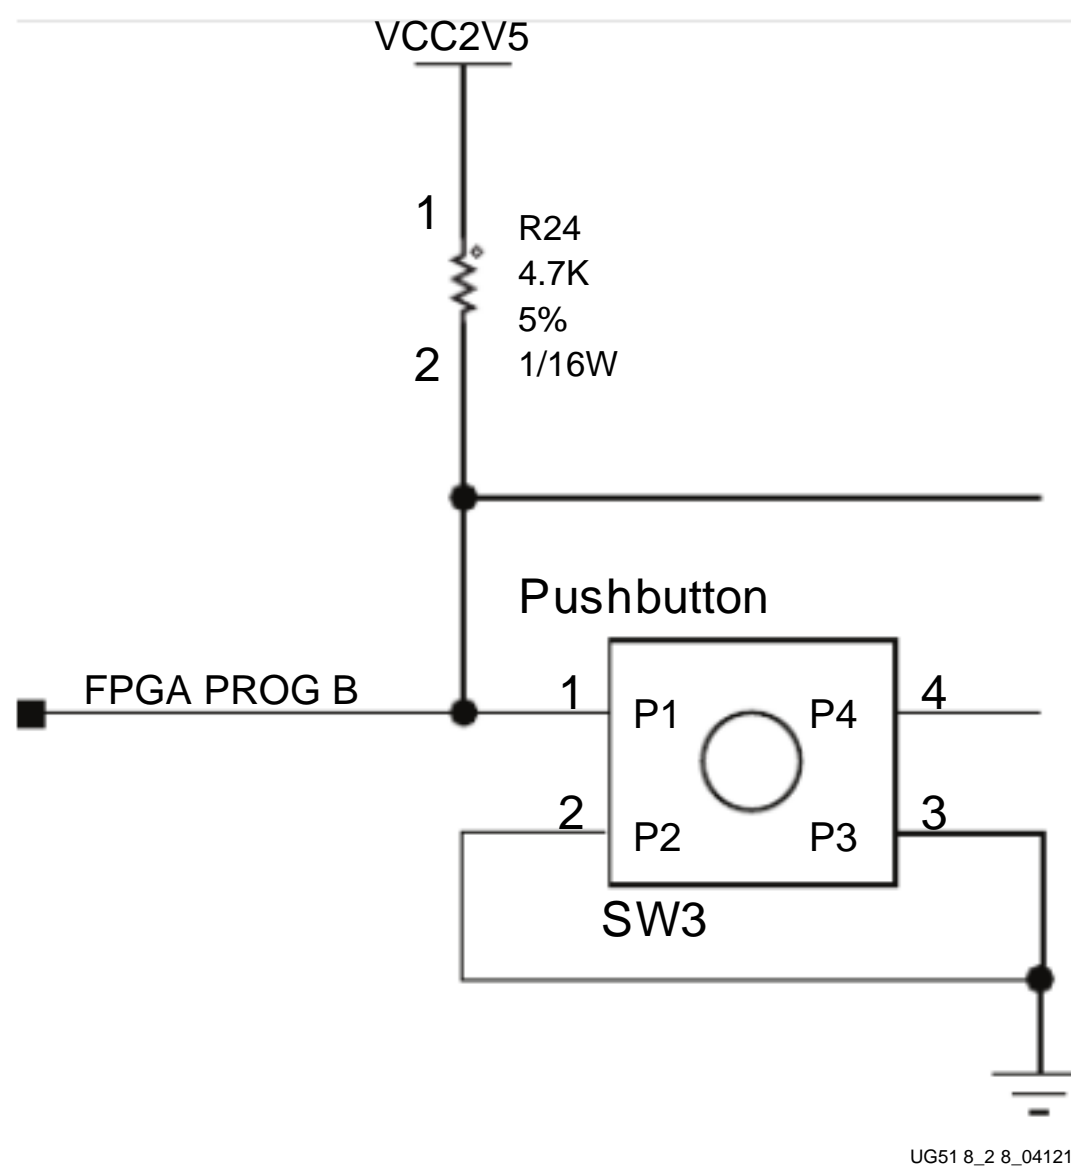

Figure 1-15:   FPGA_PROG_B Pushbutton Switch Topology

Table 1-23:   FPGA_PROG_B Pushbutton Switch Connections

FPGA U1 Pin	Schematic Net Name	SW3 Pin
V2	FPGA_PROG_B	1

15. Configuration Options

The FPGA on the SP601 Evaluation Board can be configured by the following methods:

? 3. SPI x4 Flash, page 15

? 4. Linear Flash BPI, page 17

? JTAG Configuration, page 36

For more information, refer to the Spartan-6 FPGA Configuration User Guide. [Ref 2]

Table 1-24: Mode Pin Settings (M2 = 0)

Mode Pins (M1, M0)	Configuration Mode
00	Master Byte Peripheral Interface (BPI)
01	Master SPI x1, x2, or x4
10	Not implemented on SP601
11	Not implemented on SP601

JTAG Configuration

JTAG configuration is provided through onboard USB-to-JTAG configuration logic where a computer host accesses the SP601 JTAG chain through a Type-A (computer host side) to Type-Mini-B (SP601 side) USB cable.

The JTAG chain of the board is illustrated in Figure 1-16. JTAG configuration is allowable at any time under any mode pin setting. JTAG initiated configuration takes priority over the mode pin settings.

FMC bypass jumper J4 must be connected between pins 1-2 for JTAG access to the FPGA on the basic SP601 board, as shown in Figure 1-16. When the VITA 57.1 FMC expansion connector is populated with an expansion module that has a JTAG chain, then jumper J4 must be set to connect pins 2-3 in order to include the FMC expansion module's JTAG chain in the main SP601 JTAG chain.

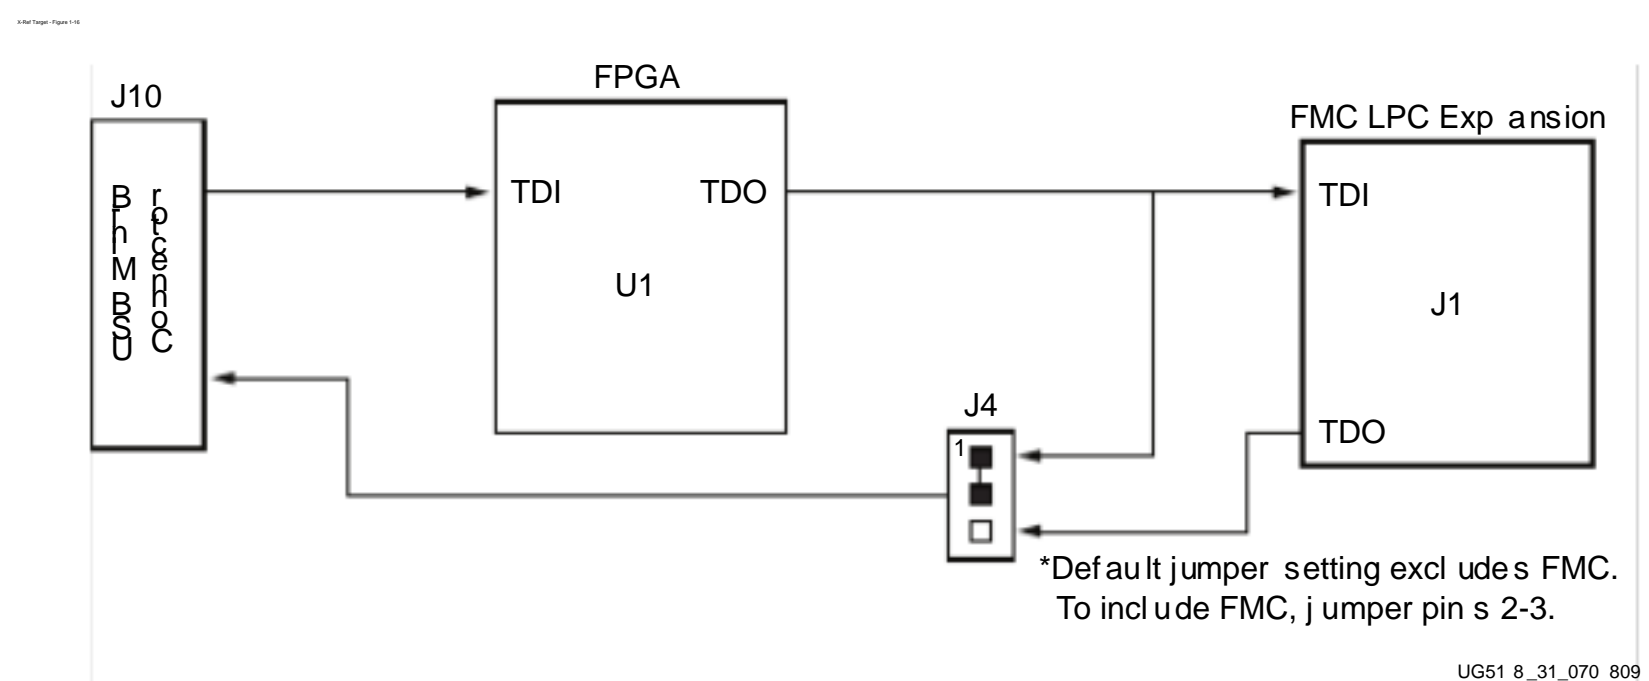

Figure 1-16: JTAG Chain
Figure 1-17: VITA 57.1 FMC JTAG Bypass Jumper

The JTAG chain can be used to program the FPGA and access the FPGA for hardware and software debug.

The JTAG connector (USB Mini-B J10) allows a host computer to download bitstreams to the FPGA using the iMPACT software tool, and also allows debug tools such as the ChipScope? Pro Analyzer tool or a software debugger to access the FPGA.

The iMPACT software tool can also program the SPI x4 flash or the BPI flash via the USB J10 connection. iMPACT can download a temporary design to the FPGA through the JTAG. This provides a connection within the FPGA from the FPGA's JTAG port to the FPGA's SPI or BPI interface. Through the connection made by the temporary design in the FPGA, iMPACT can indirectly program the SPI flash or BPI flash from the JTAG USB J10 connector.

16. Power Management

AC Adapter and 5V Input Power Jack/Switch

The SP601 is powered from a 5V source that is connected through a 2.1 mm x 5.5 mm type plug (center positive). SP601 power can be turned on or off through a board mounted slide switch. When the switch is in the on position, a green LED (DS15) is illuminated.

Onboard Power Supplies

The diagram in Figure 1-18 shows the power supply architecture and maximum current handling on each supply. The typical operating currents are significantly below the maximum capable. The board is normally shipped with a 15W power supply, which should be sufficient for most applications. The SP601 uses power solutions from Linear Technology Corporation (LTC).

Power System Test Points

The SP601 has 17 Keystone 5002 miniature PC test points, TP1 to TP17. These test points are identified in the SP601 board schematic, and the function of each is listed in Table 1-25.

Table 1-25: SP601 Power System Test Points

| REFDES	Function
TP1	5.0V Input Voltage
TP2	GND
TP3	2.5V VCCO and Logic
TP4	3.3V FMC and Logic
TP5	LTM4616 U15 ITH pin M8 for 2.5V regulator
TP6	LTM4616 U15 ITH pin F8 for 3.3V regulator
TP7	1.2V VCCINT
TP8	1.8V DDR2
TP9	LTM4616 U19 ITH pin M8 for 1.2V regulator
TP10	LTM4616 U19 ITH pin F8 for 1.8V regulator
TP11	0.9V VTT_DDR2 memory termination voltage
TP12	12V FMC
TP13	3.0V J3D U10 Flash
TP14	GND
TP15	GND
TP16	GND
TP17	GND
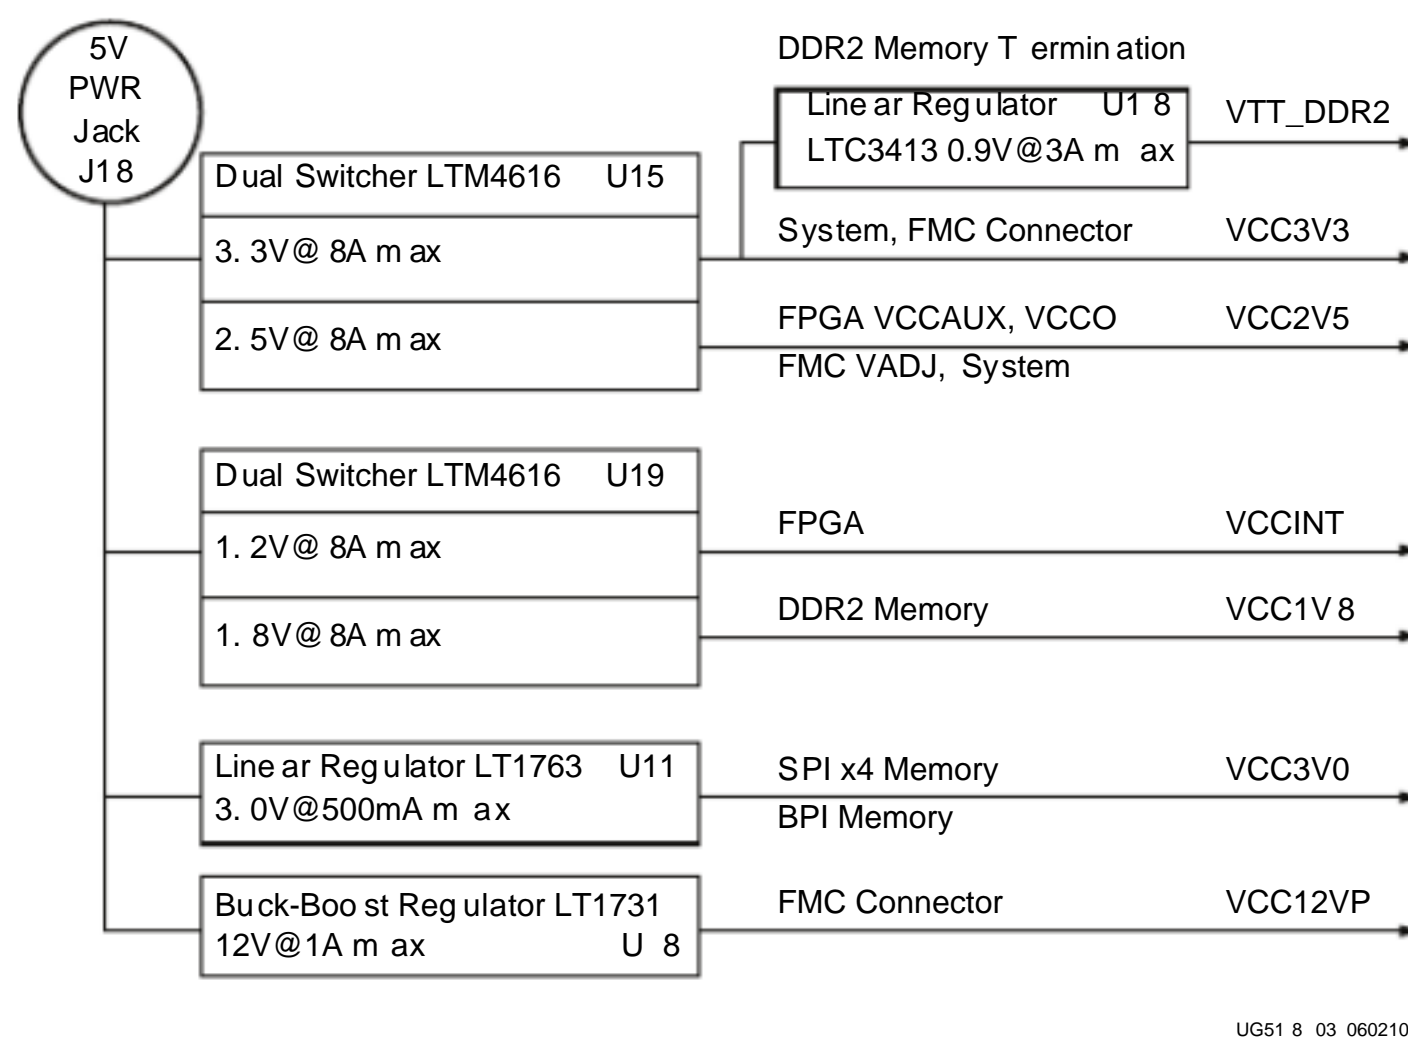

Figure 1-18: Power Supply

Table 1-26: Onboard Power System Devices

Device Type	Reference Designator	Description	Power Rail Net Name	Power Rail Voltage (V)	Schematic Page
LTM4616IV#PBF	U19	1/2 Dual 8A Switching uModule	VCCINT [1]	1.20	12

Figure B-1:   FMC LPC Connector Pinout

For more information, refer to the VITA 57.1 FMC LPC Connections table (Table 1-14).

SP601 Master UCF

The UCF template is provided for designs that target the SP601. Net names provided in the constraints below correlate with net names on the SP601 schematic. On identifying the appropriate pins, the net names below should be replaced with net names in the user RTL. See the Constraints Guide for more information.

The latest version of the UCF can be found on the SP601 board documentation website at http://www.xilinx.com/sp601 .

Regulatory and Compliance Information

This product is designed and tested to conform to the European Union directives and standards described in this section.

Directives

2006/95/EC,   Low Voltage Directive (LVD)

2004/108/EC,   Electromagnetic Compatibility (EMC) Directive

Standards

EN standards are maintained by the European Committee for Electrotechnical Standardization (CENELEC). IEC standards are maintained by the International Electrotechnical Commission (IEC).

Electromagnetic Compatibility

EN 55022:2010,   Information Technology Equipment Radio Disturbance Characteristics and Methods of Measurement

EN 55024:2010,   Information Technology Equipment Immunity Characteristics   –   Limits and Methods of Measurement

This is a Class A product. In a domestic environment, this product can cause radio interference, in which case the user might be required to take adequate measures.

Safety

IEC 60950-1:2005,   Information technology equipment   –   Safety, Part 1: General requirements

EN 60950-1:2006,   Information technology equipment   –   Safety, Part 1: General requirements

Markings

This product complies with Directive 2002/96/EC on waste electrical and electronic equipment (WEEE). The affixed product label indicates that the user must not discard this electrical or electronic product in domestic household waste.

This product complies with Directive 2002/95/EC on the restriction of hazardous substances (RoHS) in electrical and electronic equipment.

This product complies with CE Directives 2006/95/EC,   Low Voltage Directive (LVD)   and 2004/108/EC,   Electromagnetic Compatibility (EMC) Directive.
